## A MUST-HAVE FOR COTTAGE OWNERS

Canadian Innovation provides clean and easy refueling

EVERY COTTAGER knows the frustration of refueling a boat or ATV with a standard gas can. You always seem to end up with spilled fuel in your boat or worse, in the lake. This was the inspiration for Fuel Transfer Technologies Inc. of Moncton, NB who recently launched a brand new csa-approved portable refueling system, the G CAN\*.

The G CAN® is a unique 20 litre system that prevents spills, overfills and heavy lifting, providing a clean, easy, safer and environmentally responsible refueling experience.

It is estimated that 24 million gallons of fuel is spilled in North America every year using traditional portable refueling products! Also, a recent study shows that one drop of gasoline/oil mixture can pollute one million gallons of water. Not only does the G CAN\* eliminate the frustrations associated with using traditional gas cans, but its auto shut-off and vapour recovery features help prevent gasoline and harmful vapours from polluting our air, land and waters.

The G CAN\* is the convenient and clean solution for all your portable refueling needs, whether at your cottage, marina or, home.

Perfect for boats, watercraft, generators, ATVS, chainsaws ... and so much more!

Fishing legend Bob Izumi endorses the G CAN®

## The G CAN® Advantage

- √SmartSensing™ auto shut-off features
- ✓ Eliminates lifting, providing full refueling control
- √Pumps up to 9 litres/ minute
- ✓ Protects equipment by reducing fuel contamination
